

# RECOMMENDATIONS FOR THE CARE OF BRAWIX PLEX FILM

BRAWIX Plex film protects the windshield from minor chips, sandblasting, scratches, scuffing, and other external damage. During the use of BRAWIX Plex protective windshield film, the following rules should be observed:

- It is recommended to replace the windshield wiper blades at least twice a year after the film has been installed.
- Immediately remove contaminants (such as tree sap, insect remains, bird droppings, etc.) within 24 hours to avoid unwanted changes to the film.
- Use a damp microfiber cloth to wipe the windshield.
- If the car has been exposed to intense sunlight, allow it to cool down naturally before washing.

## PROHIBITED:

- washing the vehicle within 72 hours after the film installation;
- using windshield wipers without washer fluid;
- using a high-pressure washer closer than 1 meter to avoid damaging the film's clear coat;
- use of drive-through automatic car washes is not recommended;
- the use of aggressive chemicals, dyeing agents, and abrasive cleaning products when washing the windshield is not recommended;
- the use of hard brushes and scrapers for washing or cleaning the windshield from snow and ice is not allowed;
- the film is not subject to polishing.
